## **New Partnership for AI-based Project Data Management**

***ALLPLAN cooperates with the start-up elevait***

Munich - [ALLPLAN](#), provider of BIM solutions for the AEC industry, has entered into a **technology partnership with elevait**, provider of enterprise software based on artificial intelligence (AI), to make it easier for the construction and real estate industry to **access its own project data**.

For years, the construction industry has been generating and archiving ever-increasing amounts of data. This applies to designers and contractors, but also to building owners and public organizations. 80 percent of this data is

so-called dark data. This means that it is not being used to add value to the business and is also costing money. In particular, information in plan archives, data management systems and project rooms is distributed, difficult to search and often outdated and redundant.

This is where the partnership between ALLPLAN and elevait comes in. The AI start-up specializes in using AI to transform data archives into valuable sources of knowledge that create high added value for companies and public institutions. In its solution portfolio, elevait offers an intelligent search engine for proprietary documents such as plans, contracts, invoices, quotations and delivery notes. Through AI-based process management, the software reduces repetitive tasks and increases efficiency and quality within the company.

*"The collaboration between ALLPLAN and elevait in the field of AI promises to be a game-changer in the construction industry. Through the efficient use of company data, construction companies can significantly increase their efficiency and productivity and gain a clear competitive advantage,"* says Dr. Detlef Schneider, CEO of ALLPLAN.

Dr. Günther Möckesch, Managing Director of elevait, adds: *"This partnership promises to fundamentally change the way construction projects are planned, executed and managed. Innovative AI solutions will eliminate the dark figures of unused data and replace them with valuable knowledge. This will enable companies and public organizations to implement their projects more efficiently in terms of resources such as time, budget and material use."*

## **About the Nemetschek Group**

The Nemetschek Group is a globally leading software provider for digital transformation in the AEC/O and media industries. Its intelligent software solutions cover the entire lifecycle of building and infrastructure projects and enable creatives to optimize their workflows. Customers can design, build, and manage buildings and infrastructures more efficiently and sustainably and develop digital content such as visualizations, films and computer games more creatively. The software provider is driving innovations such as digital twins as well as open standards (OPEN BIM), and sustainability in the AEC/O industry, constantly expanding its portfolio by also investing in deep-tech startups. Currently more than seven million users worldwide are shaping the

world with the customer-focused solutions of our four divisions. Founded by Prof. Georg Nemetschek in 1963, the Nemetschek Group today employs around 3,600 experts globally.

Publicly listed since 1999 and quoted on the MDAX and TecDAX, the company generated revenues amounting to EUR 801.8 million and an EBITDA of EUR 257.0 million in 2022.
