

ALLPLAN integrates BIM/CAD libraries from building products manufacturer Schöck into Allplan 2023

Feb 08, 2023 19:00 UTC

Saving time and increasing design quality with manufacturer content

Munich, Feb 8 2023 - ALLPLAN, global provider of BIM solutions for the AEC industry, has announced the **integration of building product manufacturer Schöck's BIM libraries** into the latest version of its Allplan 2023 BIM software. The special feature of the new solution is that Allplan accesses the manufacturer's daily updated product data. This eliminates the possibility of accidentally using outdated product data, which leads to increased design quality.

"We are pleased that Schöck Bauteile GmbH is the first to integrate with its BIM

libraries including product data and material numbers in Allplan 2023, supporting a seamless integrated BIM workflow from design to construction - in line with our 'Design to Build' claim", says Eduardo Lazarotto, Senior Vice President Product & Strategy at ALLPLAN.

BIM is the foundation for construction projects executed in a cost-conscious manner, through optimizing workflows and saving time during the design and construction process. With the integration of the Schöck BIM libraries in Allplan 2023, digital workflow is further improved: Engineers work within the Allplan application in their familiar standard. The tedious search and conversion of fixtures are a thing of the past. Also new are the levels of detail, which can be set individually and automatically adapted to the selected scale.

Another advantage is optimized object placement - in suitable orientation - in a single work step. In addition, links to tender texts for the respective building products are stored. With the integration of the BIM libraries from Schöck, a seamlessly integrated workflow from design to construction is available, which, in addition to a flexible working method, enables increased design quality as well as time and cost savings.

About the Nemetschek Group

The Nemetschek Group is a globally leading software provider for digital transformation in the AEC/O and media industries. Its intelligent software solutions cover the entire lifecycle of building and infrastructure projects and enable creatives to optimize their workflows. Customers can design, build, and manage buildings and infrastructures more efficiently and sustainably and develop digital content such as visualizations, films and computer games more creatively. The software provider is driving innovations such as digital twins as well as open standards (OPEN BIM), and sustainability in the AEC/O industry, constantly expanding its portfolio by also investing in deep-tech startups. Currently more than seven million users worldwide are shaping the world with the customer-focused solutions of our four divisions. Founded by Prof. Georg Nemetschek in 1963, the Nemetschek Group today employs

around 3,600 experts globally.

Publicly listed since 1999 and quoted on the MDAX and TecDAX, the company generated revenues amounting to EUR 801.8 million and an EBITDA of EUR 257.0 million in 2022.
